

Welcome!

Based in Stewart, BC, **More Core Diamond Drilling Services, Ltd.** has been BC's choice for expert mineral exploration services since 2006.

Our versatile, modular drilling systems and highly experienced crew are the solution for your project.

First Nations Partnership

More Core Diamond Drilling has developed a good working relationship with some of the local **First Nations** bands in the area and remains working together to further their partnership.

More Core has provided employment and Common Core training to Nisga'a citizens and other First Nations workers from local territories. When working with First Nations, More Core operates with a set of guiding principles that support successful, long-term collaboration.

Drilling Services

Underground Drilling: We have drills to work underground using electric motors or diesel engines depending on the situation. We also have equipment to support the project such as man carriers.

Track Drilling: More Core has various new hydraulic drills that can be mounted on tracks to make moving possible without heavy equipment, limiting ground pressure in sensitive areas.

Fly Drilling: Our drills are heli-portable and can be broken down to fit in float or fixed wing aircrafts.

Skid Drilling: More Core drills are mounted in new winterized drill shacks that come with winter pump shacks. Drill and shack sizes vary depending on client requirements.

Ice Drilling: We have many years of experience drilling on glaciers as well as frozen lakes and at the same time taking care to protect the environment.

Geotechnical Drilling: More Core is uniquely suited to provide high quality geotechnical exploration drilling and testing services on a variety of project types.

If you have project needs that require special approach, we'll design a solution that will get the job done.

More Core Drills

X6 - Zinex U-5

Depth Capacity:
BQ: 2000m | NQ: 1600m | HQ: 850m
Underground or Surface Compatible
Heli-Portable and Track Mount
